B. Tech. 3rd Semester (ME) Examination – December, 2022

MATHEMATICS - III (PDE, Probability & Statistics)

Paper: BSC-ME-203-G

Time: Three Hours] [Maximum Marks: 75

Before answering the questions, candidates should ensure that they have been supplied the correct and complete question paper. No complaint in this regard, will be entertained after examination.

- Note: Attempt *five* questions in all, selecting *one* question from each Unit. Question No. 1 is *compulsory*. All questions carry equal marks.
 - **1.** (a) Define Partial Differential Equation with example. 2.5
 - (b) Explain Homogeneous Partial Differential Equation of Higher Order with example.2.5
 - (c) Define skewness and write the formula of calculating skewness. 2.5
 - (d) What do you mean by Sampling? Explain its purpose and significance. 2.5

- (e) Define Binomial Distribution and mention its assumptions. 2.5
- (f) A random variable 'X' has the following probability density function. Calculate the value of k: 2.5

X	0	1	2	3	4	5	6
p(X)	k	3k	5 <i>k</i>	7 <i>k</i>	9k	11 <i>k</i>	13k

Evamination - TINU ember 2022

- **2.** (a) Solve linear partial differential equation: 7.5 (mz ny)p + (nx lz)q = ly mx
 - (b) Solve Homogeneous partial differential equation:

$$(D^2 + 2DD' + D'^2)z = e^{2x+3y}$$

3. (a) Solve Non-homogeneous partial differential equation: 7.5

$$(D^2 + DD' + D' - 1)z = \sin(x + 2y)$$

(b) Obtain D'Alembert's solution of wave equation $\frac{\partial^2 u}{\partial x^2} = \frac{1}{c^2} \left(\frac{\partial^2 u}{\partial t^2} \right)$ given that initial deflection

$$u(x, 0) = f(x)$$
 and initial velocity $\left(\frac{\partial u}{\partial t}\right)_{t=0} = g(x)$. 7.5

UNIT - II

4. (a) Solve the following equation using method of separation of variables $4\frac{\partial u}{\partial x} + \frac{\partial u}{\partial y} = 3u$ given that

$$u(0, y) = 3e^{-y} - e^{-5y} \cdot 2x^{2} + 2x^{2} + 2x^{2} = 2x^{2} - 2x^{2} = 2x^{2} - 2x^{2} = 2x^{2}$$

- (b) Solve one dimensional Heat Equation $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$ with boundary conditions $u(x, 0) = 3 \sin n\pi x$; u(0, t) = 0 and u(1, t) = 0.
- **5.** Write down the Laplace's equation in plane in two dimensional polar co-ordinates (r, θ) and find its solution using method of separation of variables.

UNIT - III

- **6.** (a) If four coins are tossed together. Find the expectation of number of Heads. 7.5
 - (b) State and prove Chebyshev's inequality. 7.5
- 7. (a) (i) Define continuous random variable and state its properties. 2.5
 - (ii) A function is defined as follows:

$$f(x) = 0 x < 2$$

$$= \frac{1}{18}(2x+3) 2 \le x \le 4$$

$$= 0 x > 4$$

Show that it is a density function.

(b) In a bolt factory, machines A, B and C manufacture respectively 25%, 35% and 40% of the total of their output 5, 4 and 2 percent are defective bolts. A bolt is drawn at random and is found to be defective. What is the probability that it was manufactured by machine B?

7.5

5

- **8.** (a) Students of a class were given mechanical aptitude test. Their marks were found to be normally distributed with mean 60 and standard deviation 5. What percent of students scored:
 - (i) More than 60 marks,
 - (ii) Less than 56 marks?

7.5

(b) Ten participants in a contest are ranked by two judges as follows:

x	1	6	5	10	3	2	4	9	7	8
y	6	4	9	8	1	2	3	10	5	7

Calculate rank correlation coefficient.

7.5

- 9. (a) A manufacturer claims that only 4% of his products supplied by him are defective. A random sample of 600 products contained 36 defectives. Test the claim of manufacturer.7.5
 - (b) The following table gives the number of accidents that took place in an industry during various days of the week. Apply Chi-square test to verify whether accidents are uniformly distributed over the week or not:

 7.5

Day	Mon.	Tue.	Wed.	Thu.	Fri.	Sat.
Accidents	14	18	12	11	15	14
